

Swayam Barik

AI Solutions Engineer @ IBM

San Francisco, CA | swayambarik@gmail.com | github.com/sbrick26 | linkedin.com/in/swayam-barik

SUMMARY

AI Solutions Engineer at IBM owning enterprise agent deployments end to end across 116 accounts: security-hardened MCP servers and agentic frameworks running live in production, turning stalled POCs into adoptions. Exceeded first-year quota by 125%.

EXPERIENCE

AI Solutions Engineer, Horizon West Market

Jan 2026 - Present

IBM, Client Engineering

Built 3 production MCP servers - IBM i RPG modernization, LucidLink, and Sterling order-management (20 tools, 1,060 APIs) - letting AI agents drive live enterprise systems over SSH.

Drove an AI agent end to end on a live IBM i via Bob 2.0: rule extraction from a 10,000+ line legacy file, fixed-to-free RPG modernization, then compile-run-test on the box for a state pension fund.

Designed an agentic HR framework with policy guardrails across 3 live workflows - job changes, promotions, comp checks - on Workday and ServiceNow for a sports entertainment client.

Engineered the 3-layer AIDLC guardrails framework - NIST/FedRAMP policy, audit trails, CI diff gate - making enforced agent governance visible to a utility/energy client.

Founded and lead a 5-intern initiative shipping a guardrailed agent-skills + MCP library across 10+ IBM products; ran Bobathon, a hackathon, 10 times at 15-20 engineers each.

Lead competitive displacement vs GitHub Copilot, Cursor, and Claude Code with ROI frameworks backed by a 3-agent bake-off producing reproducible per-tool cost, security, and test evidence.

Brand Technical Specialist, Data and AI

Mar 2025 - Jan 2026

IBM

Exceeded first-year quota by 125% across 20+ accounts, differentiating watsonx from Azure OpenAI, AWS Bedrock, and Google Vertex AI, and demoing live at AWS re:Invent to ~400 booth attendees.

Tech-led 2 IBM i RPG-modernization Bobathons for major US trucking firms; both clients purchased Bob, and the reusable 6-phase template spread across Horizon markets.

Diagnosed 2 watsonx Orchestrate product gaps on a beverage-manufacturer PoX and built a custom Python connector wrapper; WXO shipped nested-folder support as a feature ~1 month later.

Created repeatable client-specific watsonx demo frameworks mapping business pain to quantifiable watsonx.ai and Orchestrate outcomes, cutting time-to-close across 20+ accounts.

Software Engineer

Feb 2022 - Apr 2025

Qureez

Built a real-time grid-dispatch integration (80% success under overload) and shipped an RBAC system to AWS Marketplace serving hundreds of accounts; led a 5-person team.

Launched AI Bench Studio, an infrastructure benchmarking platform (YCSB/TSBS + Grafana) on AWS Marketplace, and led a PWA migration that lifted mobile app usage ~50%.

Software Engineer, iOS Profile Team

Jun 2022 - Jan 2024

LinkedIn

Shipped Swift/Obj-C iOS profile features; Top Skills engaged 600K+ members for a ~10% weekly-active lift via LIX A/B tests.

Shipped Career Break (~11% more additions) and Next Best Action prompts (~14% more profile updates), driving the Skills First profile initiative.

Engineered 2 reusable API-driven iOS components - a stateful Connect/Follow action button and a re-orderable skills module - adopted across multiple profile sections.

Software Developer

Aug 2021 - Dec 2021

ALNA Properties

Shipped a Python/Firebase BI tool over thousands of MLS listings with image-processing AI, cutting outsourcing costs 80%.

SKILLS

languages + core: Python, SQL / Db2, TypeScript / JS, Swift / Obj-C

ai / agents: watsonx Orchestrate, Agent SDK, MCP servers, Agent guardrails / governance, LLM APIs + prompts, Evals, IBM Bob

cloud + data: AWS, OAuth 2.0 / OpenAPI, MS Graph / Workday / ServiceNow, Docker

customer-facing: POC design + deployment ownership, Technical scoping + discovery, Stakeholder management, Competitive displacement + ROI, Tech lead / intern leadership

EDUCATION

Software Engineering Bootcamp

2020

Dominican University of California
