

Swayam Barik

AI Solutions Engineer @ IBM

San Francisco, CA | swayambarik@gmail.com | github.com/sbrick26 | linkedin.com/in/swayam-barik

SUMMARY

AI Solutions Engineer at IBM owning enterprise agent deployments end to end across 116 accounts: security-hardened MCP servers and agentic mainframe-modernization frameworks running live in production, turning stalled POCs into adoptions. Exceeded first-year quota by 125%.

EXPERIENCE

AI Solutions Engineer, Horizon West Market

Jan 2026 - Present

IBM, Client Engineering

Build 3 production MCP servers - IBM i RPG modernization, LucidLink, and Sterling order-management (20 tools, 1,060 APIs) - letting AI agents drive live enterprise systems over SSH.

Drove an AI agent end to end on a live IBM i: rule extraction from a 10,000+ line legacy file, fixed-to-free RPG modernization, then compile-run-test on the box for a state pension fund.

Modernized IBM Z CICS green-screens into a React UI calling the live mainframe via an AI coding agent; anchored a 40-developer client Bobathon that landed a premium Z package trial.

Shipped watsonx Orchestrate agents on live client tenants: email triage classifying 2,000-3,000 EDI alerts/day (won bake-off vs Copilot Studio) and HR automation across 3 Workday + ServiceNow workflows.

Founded a 5-intern initiative shipping an agent-skills + MCP library across 10+ IBM products; mentored 2 intern hackathon teams to a 1st-place win out of 25.

Created Bobathon, a full-day enterprise hackathon series run 10+ times with 15-40 engineers each; 2 trucking-client events converted directly into product purchases.

Brand Technical Specialist, Data and AI

Mar 2025 - Jan 2026

IBM

Exceeded first-year quota by 125% across 20+ accounts, differentiating watsonx from Azure OpenAI, AWS Bedrock, and Google Vertex AI through end-to-end technical evaluations.

Designed and ran a live watsonx demo at AWS re:Invent for ~400 booth attendees, generating 314 new pipeline opportunities across multiple industries.

Diagnosed 2 watsonx Orchestrate product gaps on a beverage-manufacturer pilot and built a custom Python connector wrapper; WXO released nested-folder support as a product feature ~1 month later.

Software Engineer

Feb 2022 - Apr 2025

Qureez

Engineered a real-time grid-dispatch integration hitting 80% success during grid overload events and released an RBAC system to AWS Marketplace serving hundreds of accounts.

Launched AI Bench Studio, an infrastructure benchmarking platform (YCSB/TSBS + Grafana) on AWS Marketplace, and led a PWA migration that lifted mobile app usage ~50%.

Led daily standups and sprint planning for a 5-person offshore team delivering full-stack web, mobile, and IoT energy platforms in TypeScript, React, and Node.js.

Software Engineer, iOS Profile Team

Jun 2022 - Jan 2024

LinkedIn

Shipped Swift/Obj-C iOS profile features; Top Skills engaged 600K+ members for a ~10% weekly-active lift via LIX A/B tests.

Launched Career Break (~11% more additions) and Next Best Action prompts (~14% more profile updates), driving the Skills First profile initiative.

Engineered 2 reusable API-driven iOS components adopted across profile sections; facilitated monthly meetups for a 35-person early-career engineering cohort.

Software Developer

Aug 2021 - Dec 2021

ALNA Properties

Automated manual MLS listing review with a Python/Firebase BI tool scoring thousands of listings daily via image-processing AI, cutting outsourcing costs 80%.

SKILLS

languages + core: Python, SQL / Db2, TypeScript / JS, Swift / Obj-C

ai / agents: watsonx Orchestrate, Agent SDK, MCP servers, Agent guardrails / governance, Mainframe modernization (Z / i), LLM APIs + prompts, Evals, IBM Bob

cloud + data: AWS, OAuth 2.0 / OpenAPI, MS Graph / Workday / ServiceNow, Docker

customer-facing: POC design + deployment ownership, Technical scoping + discovery, Stakeholder management, Competitive displacement + ROI, Tech lead / intern leadership

EDUCATION

Software Engineering Bootcamp

2020

Dominican University of California
