

Swayam Barik

AI Forward Deployed Engineer @ IBM

San Francisco, CA | swayambarik@gmail.com | github.com/sbrick26 | linkedin.com/in/swayam-barik

EXPERIENCE

AI Forward Deployed Engineer

Jan 2026 - Present

IBM, Client Engineering - San Francisco, CA

- Manage technical strategy and full engagements end to end for 20+ large and mid-market enterprise accounts in the western US - leading requirements discovery, drafting engagement plans, and hosting in-person and virtual working sessions that win buy-in - through architecture, build, and post-sales adoption
- Main speaker at the ALIGN AI Executive Summit (SF): live demonstration of IBM Bob (Agentic Coding IDE/Shell) running the full AI SDLC - Jira planning, Figma design, development, CI/CD, MCP deployment into watsonx Orchestrate - with agent identity via HashiCorp Vault and every governance decision tracked
- Design and build the full agentic stack - agents, MCP servers (Python/TypeScript), tools, skills, knowledge and data layers - for clients in 6+ industries: a Sterling order-management agent doing natural-language diagnosis and remediation, a secure IBM i/RPG modernization MCP server, email-classification and data-readiness agents, a 6-agent HR system over Workday and Teams (caching, cross-step memory), and a live in-game translation agent (speech-to-text on Orchestrate) for a major video game publisher
- Engineer and guide Bob rollouts - custom rules, skills, hooks, workflows, and modes; CI/CD checks and deployments run by Bob shells; agent and MCP builds deployed into watsonx Orchestrate - with governance, usage-tracking, and cost best practices, on legacy codebases (RPG on IBM i, COBOL to Java, mainframe green-screens to React) and modern ones; 3 enterprise deals closed
- Created Bobathon for IBM's Horizon West market: a workshop-plus-hackathon format teaching teams Bob's agents, skills, rules, and governance hooks wired into their real SDLC (Jira, Figma, GitHub, Monday, watsonx Orchestrate, and more) - 20+ run, about 1 in 3 purchased and adopted IBM Bob
- Grow adoption after the sale and expand it: initial workflows, rules/modes/skills setup, best-practice guides, then the next use case - an HR launch grew into IT-team automation, in-game translation is spreading to more titles - 30-40% usage and token growth
- Lead 5 engineers building a plugin library (skills, rules, modes, MCPs) across 10+ IBM products; mentored intern teams to a 1st-of-25 hackathon win and a tool now official inside IBM; beta contributor on Bob 2.0's GA and its premium IBM i, Z, and Java packages
- Feed the field back into the product: work with product teams to reuse and embed deployed client code into watsonx Orchestrate and IBM Bob - 4 major product improvements, helping lead the sales-to-client-to-product pipeline

AI Solutions Engineer, Data and AI

Mar 2025 - Jan 2026

IBM, Client Engineering - San Francisco, CA

- Exceeded first-year quota by 125% owning technical evaluations end to end across 20+ enterprise accounts - POC wins head-to-head against Microsoft Azure OpenAI, AWS Bedrock, and Google Vertex AI
- Designed and presented a live watsonx demonstration at AWS re:Invent that drew ~400 attendees, generating hundreds of inbound client conversations and new pipeline
- Led competitive displacement against GitHub Copilot, Cursor, Claude Code, Codex, and other AI tooling with tailored technical narratives and ROI frameworks
- Built repeatable, client-specific demonstration frameworks turning business pain points into quantifiable watsonx.ai, Orchestrate, watsonx.data, and watsonx.governance outcomes - cutting time-to-close, improving win rates

Software Engineer

Feb 2022 - Apr 2025

Qureez - Pleasanton, CA

- Delivered full-stack web, mobile, and IoT platforms for startups (TypeScript, React, Next.js, Node.js, AWS, MongoDB) driving energy reductions across large commercial and industrial buildings, while project-managing a 5-person offshore team
- Engineered an ERCOT grid-signal integration hitting an 80% success rate during grid overloads; shipped a role-based access control system to AWS Marketplace serving hundreds of accounts
- Created AI Bench Studio, an AWS Marketplace platform for benchmarking AI infrastructure (YCSB/TSBS, Grafana); led a PWA migration that boosted mobile usage ~50%

Software Engineer, iOS Profile Team

Jun 2022 - 2024

LinkedIn - San Francisco, CA

- Shipped core profile features in Swift/Objective-C across the Skills First initiative: Top Skills (600K+ members engaged, ~10% weekly-active lift), Career Break Associations (~11% lift), Next Best Action prompts (~14% more profile updates)
- Built reusable API-driven UI components adopted across profile surfaces - a stateful Connect/Follow button, a re-orderable skills module - and ran LIX/T-REX A/B experiments end to end; organized monthly meetups for a 35-person early-career cohort

Software Developer

Aug 2021 - Dec 2021

ALNA Properties - Dallas, TX

- Built a Python/Firebase tool with image-processing AI scoring thousands of MLS listings a day, cutting outsourced review costs 80%

PROJECTS

Swaygent - self-running agentic system maintaining imsway.dev and this resume: 13 Claude agents behind one orchestrator, Telegram one-tap approvals, golden-set evals, self-healing audits, keyless CI deploys (GitHub OIDC) onto AWS with usage metering, cost tracking, alerting. Live at imsway.dev; engine at github.com/sbrick26/career-engine

Bobwork - web app for an agentic CLI with a council mode - 5 parallel agents, peer review, chairman synthesis (Node.js, Next.js, SQLite, WebSockets); Bob runs in the pipeline: automated review checks, branch management, code hygiene and cleanup with regression testing

Coding-agent benchmarking platform - benchmarks IBM Bob against Claude Code, Codex, and others - standard suites plus custom benchmarks (multi-turn evolving requirements, enterprise migrations verified on real databases) behind integrity gates that catch reward-hacking

SKILLS

AI and agents: agentic architecture, orchestration, MCP, RAG, prompt engineering - IBM Bob, watsonx (.ai, Orchestrate, .data, .governance), Claude Code, Managed Agents, Codex, Cursor; models: Granite, Llama, GPT 5.4, gpt-oss, Claude (Opus, Sonnet, Fable 5, Haiku)

Governance and safety: governed AI SDLC (audit logging, blocking rules, tracked decisions), agent identity (HashiCorp Vault), privacy guards in CI, agent evaluation with integrity gates

Engineering: TypeScript, JavaScript, Python, Swift, Objective-C; React, Next.js, Node.js, AWS (Lambda, CloudFront, S3, OIDC), GitHub Actions, MongoDB, Firebase, SQLite, WebSockets, GraphQL, Telegram Bot API

Field: discovery and solutioning, executive briefings, public speaking and live demonstrations, POC/pilot creation and management, ROI frameworks, competitive positioning, pre- and post-sales adoption

Education: Dominican University of California - Software Engineering Bootcamp, 2020
